SKILLS

Languages
TypeScript · Go · C# · Python

Front-end & visualization
React · Vue 3 · single-spa · Dockview · MapLibre · deck.gl · Unity 3D

Services & interoperability
API REST · MQTT · AIS · NMEA · CoT · MAVLink

Quality & tools
Jest · Vitest · SonarQube · GitLab CI · Docker · Git · Postman · Jira · Figma

EDUCATION

React · TypeScript
Datacorp · 2026

TypeScript · Docker · Vue.js
Datacorp · 2023

Polymorph
Final-year internship · 2013

Bachelor's degree in real-time 3D
3DI Laval · 2012–2013

BTS in Visual Communication – Multimedia option
3DI Laval · 2010–2012

LANGUAGES

French (Native) · English (Technical)

Alexandre Plana

Full-stack developer with front-end expertise

Industrial applications · UI/UX · Cross-platform

PROFILE

I develop industrial applications, drawing on a strong front-end and UI/UX background that I now extend across the full stack. On Xistar, I work from the operator interface through to the services that ingest and distribute operational data. My approach connects user needs, architecture and technical constraints, with close attention to product consistency from the initial design to delivered code.

PROFESSIONAL EXPERIENCE

Datacorp – R&D Consultant – X-PERT — 2026

Xistar – Maritime Tactical Command Center · Full-stack developer · 2026
Full-stack developer on Xistar, a browser-based maritime tactical command center. I help design operator workflows and implement them with TypeScript and React, while also developing services in Go. The product combines tactical mapping with MapLibre and deck.gl using NATO APP-6D symbology, interoperability through MQTT and API REST, multi-screen control and history navigation. Related projects : Drone & naval fleet simulator · Mobile app · Screen wall emulator.

X-PERT design system – from Figma to applications · UI design & front-end architecture · 2026
A shared design system for X-PERT's technical applications, company website, documents and videos. Components are designed in Figma, developed in TypeScript with React and shadcn, then distributed through a private npm registry. The library and its internal documentation cover both standard interface elements and technical visualizations.

AI-assisted promotional video creation workshop · R&D · Creative coding & AI · 2026
An R&D workshop for creating promotional videos with generative AI. Animation generation in HTML and WebGL and the use of HyperFrames connect creative coding with animation, using code as the medium for creating promotional sequences.

AI agent execution workflow · AI workflow design & development · 2026
Designed an AI-agent-assisted development workflow based on the BMAD method. My personal project Iasit helped me become familiar with agent coordination, execution tracking and improvement loops. Each project has a dedicated Docker image, runs are dispatched through GitLab CI, and a Vue 3 and TypeScript tool reports their progress.

Schneider Electric – R&D Consultant – Datacorp — 2017 – 2026

Industrial Automation Edge (IECA) · Front-end developer · 2023 – 2026
Front-end developer on IECA, Schneider Electric's IIoT Edge platform, with occasional back-end contributions. I worked across several functional areas—connectors, computations, conditions, alerts and scripting—as well as the shared foundation of a micro-frontend architecture built with Vue 3, TypeScript and single-spa.

Augmented Operator Advisor (AOA) – Industrial AR Application · C# / Unity Developer · 2017 – 2023
Developer in C# and Unity on Augmented Operator Advisor, a cross-platform industrial AR application for Android, iOS and Windows. My work covered front-end architecture and operator interfaces, offline operation and project compatibility across versions. I also contributed to the project server in Python and its HTTP exchanges with the application.

Oreka Engineering – C# / Unity 3D Developer — 2013 – 2017

Industrial XR Projects – EDF · RTE · AREVA · DCNS · SUEZ · C# / Unity 3D Developer · 2013 – 2017
C# / Unity 3D developer at Oreka Engineering on training applications, simulators and visualization tools for EDF, RTE, AREVA, DCNS and SUEZ. I contributed from the functional-design stage, translating requirements and operational procedures into interactive scenarios, then implemented them in C# with Unity, integrated CAD models and delivered the applications. Related projects : Musculoskeletal disorder prevention tool · Dosicase · EMEM mobile equipment evacuation enclosure · Aeroball · Radiation protection · Steam-generator maintenance · Radiation protection for interventional surgery.

PERSONAL PROJECTS

iasit (AI-assisted development workflow) · **vorrery** (3D educational sandbox) · **kin** (Self-hosted application)
